

## Everything's a Conversation: Reading Away Isolation

---

### **Meet Sarah Brown Wessling, Johnston High School**

---

In the sections and chapters that follow, I will invite you into my classroom, along with the classrooms of other high school English language arts teachers whose experiences in planning and implementing instruction can help you to think about how you can contextualize and build using the CCSS, established NCTE principles, and the instructional practices you already use that work well.

My teaching began twelve years ago, eleven of which have been at Johnston High School in Johnston, Iowa, where I have taught a range and variety of courses throughout my tenure. The suburban high school, currently comprised of 1,300 students in grades 10 through

12, has seen incredible growth in population over the past fifteen years, which has created a steady trajectory of adding teachers, managing ballooning class sizes, and ever-changing student populations. Each year, this community now welcomes more ELL (English language learner) students and those utilizing free and reduced-price lunch. While some courses at the high school are on a block schedule, all courses in the English department meet once a day for forty-four minutes. All but two course offerings (tenth-grade Integrated Language Arts and Advanced Placement Literature and Composition) are semester length. Students choose classes from a newly recon-

structured set of course offerings designed around fifteen thematic topics (e.g., Teen in the World, Power of Persuasion, Reading the Screen, or Culture Clash). Designed around themes, these courses each integrate various strands of literacy—reading, writing, speaking, viewing, and listening—and each position fiction, nonfiction, and informational texts in the context of unit construction. These course offerings are designed for differentiation within each class, so all kinds of learners are included in any given classroom of approximately twenty-three to twenty-eight students. In addition to my work at Johnston High School, I served as a national ambassador for education as the 2010 National Teacher of the Year.

When you walk into my classroom, you'll find a Jackson Pollock print on the wall. At the beginning of the school year it usually doesn't take too long for a student looking at it to say something like, "I could be famous too if all I did was take paint and splatter it all over a canvas." I wait in anticipation for this moment of provocation, when a student unknowingly invites a conversation about the difference between appearance and reality, the relationship between chaos and precision. I'm anxious to tell them about Pollock's immersion into process, his captivation with intentionality and his precision of practice that transcends into art. The work of Jackson Pollock reminds me that like quality instruction, what may appear chaotic is deliberate, precise, and carefully designed.

## Contextualizing

The way we design instruction with local context and the CCSS in mind determines the kind of learning that will emerge on the canvas of our classrooms. What we emphasize, what we say, and what we spend our time engaged in will emerge in what and how our students learn. So, we are deliberate, knowing that what happens on the first day and how it connects to the last day matters. We are precise, cognizant that the language of learning permeating our classrooms affects thinking.

In concert with my classroom accounts, co-contributors to this volume, Danielle Lillge and Crystal VanKooten, spent time collaborating in English language arts classrooms and have created companion vignettes that will take us into additional environments that are balancing classroom practice with standards integration. All the teachers in this volume have generously invited us into their classrooms to experience teaching and learning moments that illustrate how the chaos of their classroom life is indeed deliberate, precise, and carefully designed. The teaching and learning practices described highlight the ways these teachers work to enact NCTE principles that affirm the value of the knowledge

As you read through the chapters in this volume, look for the following symbols to signal various themes and practices.

**Honoring  
Diversity**

and experience students bring to school, the role of equity in literacy learning, and—always—the learning needs of students while attending to the CCSS. Each of two teaching and learning vignettes within each chapter is preceded by a brief description of the context in which the teacher and his or her students are working and is followed by an explanation of the teacher’s journey to developing pathways to enact these practices because, as we all know, exemplary moments in teaching are the product of many years of studying classroom practice, discussing ideas with colleagues, and reflecting on teaching and learning. Charts following the vignettes highlight key teaching and learning practices and connect them with specific CCSS and with NCTE research-based principles, and finally, the “Frames That Build” sections offer exercises to help you think about how the teaching and learning practices highlighted in the vignettes can connect to your local teaching context.

**Connections**  
Section III focuses exclusively on the building frame. There, you will find specific resources for building your instruction with the CCSS and for working with colleagues to observe patterns in the CCSS document compared to previous local and state standards.

It is our hope that these teaching and learning vignettes and the corresponding materials will serve as a reflection of the language of learning that already fills your classrooms, and that they will demonstrate a framework that allows thinking about not just *what* we do, but *why* we do it. We hope they will remind us that in the layers of local, state, and national values, the greatest intentionality comes from the classroom teacher who enters the complexity and emerges with a process that honors the learning in our classrooms. We invite you to step into these classrooms, reflect on them, and use their successes and challenges to further your own thinking about what bridges you can build between the CCSS and your own instruction.

## Teaching and Learning Practices for Reading: Sarah’s Classroom

---

I remember noticing the time that spring afternoon during my second year of teaching. My ninth graders and I had spent the last forty-five minutes going question for question, point for point, and I had a sinking feeling as I realized this would be our last discussion of Maya Angelou: the posturing of points. Did it really matter if they could recall every *what* I put in front of them? I thought I had been using themes, such as power, to frame this unit, but actually, I was still teaching the details of a book, not offering for my readers the kind of authentic experience we all crave. I was teaching them how to read for school, not for life, and thus, I couldn’t blame them for how I’d inadvertently set up this horrible forty-five minutes of point-mongering.

I vowed to rethink what it meant to be an authentic reader, to reread Nancie Atwell and Louise Rosenblatt with the eyes of experience wide open. I paid attention to my own reading habits, especially as I read challenging texts and worked to construct meaning with them. I quickly realized that texts cannot operate in isolation the way I was teaching them. I had been organizing my teaching around themes, but

I hadn't really been using them to prepare students to read for complexity because I still was teaching the *what* of *I Know Why the Caged Bird Sings* without the kind of context and texture that liberates students to read complex texts for layers of meaning.

The shift in how I created reading experiences has its roots in that day. To realize that change, two things had to happen: (1) I needed a shift in thinking and (2) I needed a deliberate and honest implementation of that new paradigm. That day serves as a poignant reminder that there are all kinds of "moves" in our classrooms that quickly, silently, powerfully subvert our best intentions. In this case, using a highly objective test spoke more loudly about what I valued in a reading experience than any mention of our theme had up to that point.

So, my inquiry began in understanding *how* to craft a reading experience that scaffolded us to greater understanding and meaning-making. As I realized that teaching a theme and thematic teaching were distinctly different instructional endeavors, it also occurred to me that teaching thematically meant I had to design reading experiences in such a way that texts would talk to each other. I started by gathering a variety of texts that extended one main text in similar ways. *Romeo and Juliet* was preceded by excerpts of marriage stories from *Marry Me* as well as selected Shakespearean sonnets. Instead of watching a film version of the play, we juxtaposed excerpts of three different versions, working to establish how nuanced interpretations offered texture to our interaction with *Romeo and Juliet*.

Soon, even this approach gave way to more intentionality in text selection and, thus, more complexity. Later, I recognized that my centerpiece text was never as powerful without the benefit of other texts to provide context. *The Stranger* wasn't as powerful without excerpts of *Sophie's World*, Charlie Chaplin, or punk rock music to amplify it. Our investigation of it wasn't complete without juxtaposing Camus to Jean-Paul Sartre's *No Exit* to offer contrast, to spark questions, to prompt curious distinctions. Before long, we were hearkening back to Salinger, Peter Kuper's graphic novel of *The Metamorphosis*, and *One Flew Over the Cuckoo's Nest*. Even though we moved on to a juxtaposition of Flannery O'Connor and Mary Shelley, our discussion of good and evil was fueled by the likes of Mersault and the other authors, characters, and ideas that permeated our course. I had not only learned to teach thematically, but I had also learned how to design a recursiveness in text selection that mirrored and honored the kind of recursiveness we practiced as writers, thinkers, viewers, and readers.

**Connections**  
Sarah's use of a thematic approach is one way to organize units. See Section III for more ideas about how to plan with this in mind.

### ***Sarah's Journey: Pathways to Enact These Practices***

A consistent feature in the CCSS, one that extends across all grades, asks students to stop seeing texts as isolated pieces of work and to compare them to other texts. As the texts become more complex and students become more savvy, the reading goes

beyond even compare/contrast and moves toward juxtaposing texts to reveal their layers and nuances. Certainly, one component of helping students read complex texts resides in the strategic instructional moves that guide and scaffold students while they are in the process of reading the texts. Yet, as we interpret the CCSS, it's equally important to consider how we select texts and organize reading in a way that invites scaffolding and establishes layered reading of complex texts.

 **Integrated Teaching and Learning**

Sarah's approach to texts resists having students read one text in isolation, but instead seeks to layer different types of texts—print, canonical, multimedia, and popular culture texts—on top of one another.

Reading, especially complex reading, doesn't occur in isolation. In imagining a reading experience that is scaffolded by design, that resists reading in isolation, and welcomes a situation in which texts "talk" to each other, I've used a concept (see Table 2.1) to design instruction that deliberately layers the reading of texts by way of conceptual reading circles (unlike student reading groups, these "circles" demonstrate how we can layer the reading of classroom texts). Just as I started with *Romeo and Juliet* or *The Stranger*, many teachers may begin by choosing their major or *fulcrum* text, the selection that is the centerpiece of any unit of study. The fulcrum text is one that offers distinct layers of meaning and complexity for the reader. It may be of considerable length, it may use nonlinear narrative structure, it may be considered a "classic." This is the fulcrum text because it is the most complex and the work that comes before and after helps to tease out and maneuver its complexities. Students work toward reading independence with these texts.

Context texts	Fulcrum texts	Texture texts
<i>These accessible "anchor" texts create a reservoir of prior knowledge that gives context to the complexity of further reading.</i>	<i>These texts are often the traditional whole-class text or they take the place of that whole-class text.</i>	<i>While these texts often seem to be shorter, it also is effective to juxtapose two major texts to create reading texture.</i>

**TABLE 2.1:** Sample Texts for Reading Complexity Circles

Crucial at this point is letting go of the idea that our focus is teaching the content of the text rather than skills of reading and thinking. In other words, I don't teach *To Kill a Mockingbird*, I teach "courage," and *To Kill a Mockingbird* is but one of the texts used to explore the idea of courage. Therefore, organizing a reading experience around an idea versus a book title becomes central to including both the *context* and *texture* texts that expand the potential of the reading experience. A *context* text(s) anchors the reading experience by generating prior knowledge while connecting to student interests, motivations, and questions. It is accessible and it creates motivation. It may have teenage protagonists or be particularly brief. It deals with the theme or essential question in succinct or overt ways. It may set up vocabulary or scenarios crucial to the other texts; it anchors thinking.

The *texture* texts, then, are read either in conjunction with the fulcrum text or after it. *Texture* texts do just that: add texture to reading and thinking through their juxtaposition. They may be read both simultaneously and/or after other texts. These texts may contradict another work, may focus in on one aspect of another work, or may illuminate another work in some fashion. These texts are often brief because they may be complex, technical, or appropriate for shared reading. As readers must tease out the implicit nuances of these texts, the opening for use of ongoing and specific textual evidence emerges as part of the classroom discourse. Perhaps most importantly, the fulcrum text from one unit then informs the reading and learning of the next unit. In a curriculum that is ongoing and progressive, the fulcrum text in one unit becomes part of the continuing discourse of the class and, thus, becomes part of the context for upcoming units. Just as *The Stranger* went from a fulcrum text in one unit to providing context for Flannery O'Connor in the next, this model creates a recursiveness in which even the units are no longer in isolation of each other.

Certainly, teachers come to this work of implementing reading standards with text complexity from various circumstances. Few teachers are able to imagine and implement without navigating many levels of school bureaucracy. Regardless of one's teaching situation, creating these kinds of reading experiences is possible.

In looking at Table 2.1, it's crucial to note that text types can quickly move from one column to another. Further, these columns are representative of different types of texts, rather than offering a complete list. In implementing reading complexity circles, it's less important to choose the "right" kind of text for each circle and far more vital to use the selected texts with intentionality. In other words, *how* the texts are used to scaffold the reading experience takes precedence over *which* texts are chosen. The same text could work in each of the three circles. For instance, a short story could be the fulcrum text of a unit, knowing that its purpose there is to spend extended time with the short story, teasing out its many layers. In another scenario, the same short story could be juxtaposed with a book-

#### **Common Core State Standards**

Students in Sarah's classroom are given opportunities to read a range of texts—literary and informative—including those from various modes and sources. They read texts of increasing complexity at both their independent and instructional levels. Sarah believes this fosters an environment in which learners can take intellectual risks.

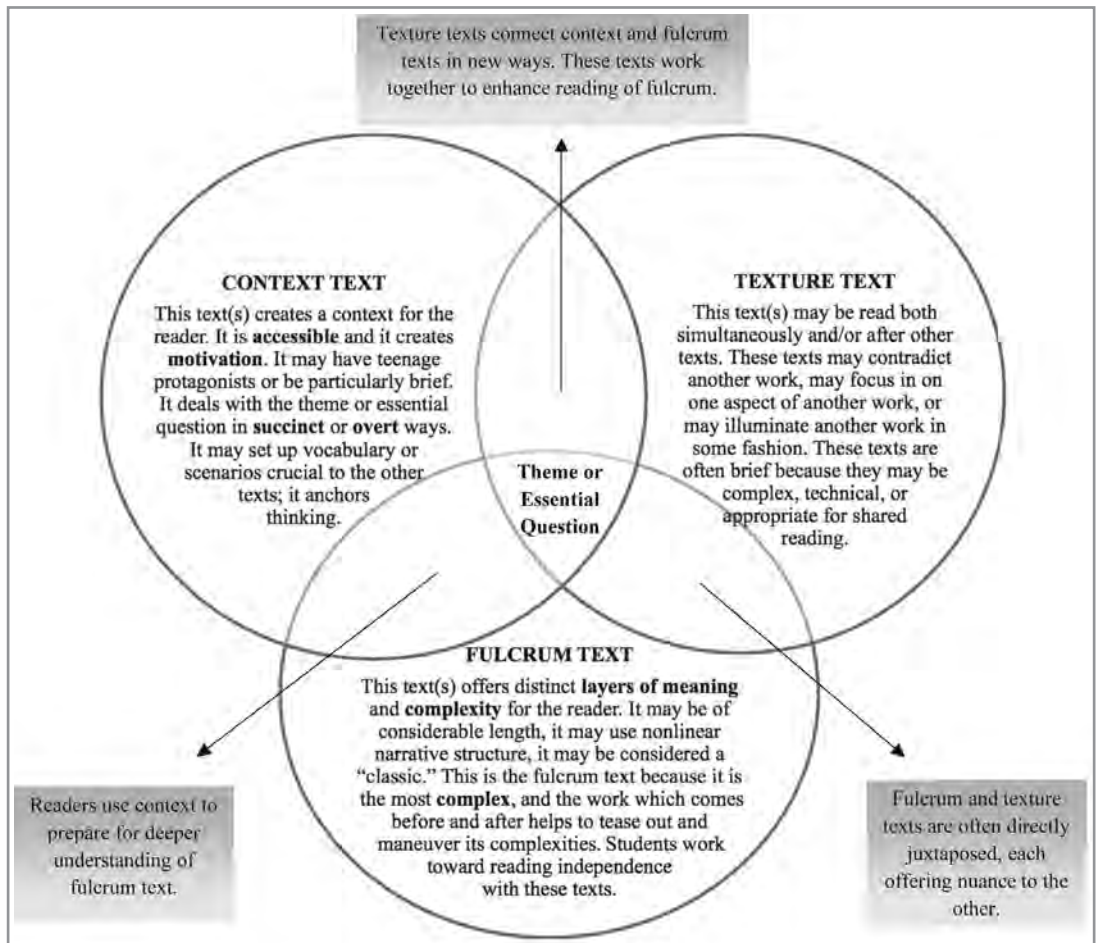

length nonfiction text and serve to provide texture or perspective to the nonfiction. In yet another scenario, the short story could create context for the fulcrum text, a drama. Intentionality and execution of the design depends on using all three circles at any given juncture of a course. Simply envisioning a single text in three ways (the short story as representative of all three) underestimates the power and recursiveness of designing with text complexity in mind.

For example, I recently taught a course in which *The Odyssey* was one of the major texts. I began planning by determining which facets of the content I wanted students to learn. The power of allusion? The importance of metaphor? The theme of journey? I also thought about the skills that students should emerge from this unit with. The ability to read closely? The ability to analyze the literature? The ability to write convincingly about the text? Through this exploration, the essential question emerged: How do physical journeys fuel personal insights? With the question posed and the skills to focus on elevated, the content needed to fuel our inquiry. The fulcrum text, *The Odyssey*, became the text we needed to unpack the most. To frame that text, I chose *Star Wars* and some excerpts from Joseph Campbell as context texts. The context texts allowed us to practice our skills and create a reservoir of language and ideas that enabled readers more access to *The Odyssey*. Then, as we read our fulcrum text, we added the potential for nuanced readings by juxtaposing *The Odyssey* with an NPR piece on veterans and violence along with excerpts from the *Frontline* episode “A Soldier’s Heart.” By making sure that students saw how these texts weren’t isolated, but how knowing one lends depth to another, they were far more prepared to deal with the text complexity before them. Layering instructional design in this way also created ongoing writing and speaking experiences.

As we consider enacting these practices, we each have the reality of our book closets to go to. On opening those doors, some may see an abundance of options, while others may feel constrained by what they see. Regardless of your reality, there is a place to begin. Certainly my journey has been a progressive one. Throughout my teaching experiences, I have found myself in a variety of scenarios that range from working within a fixed curriculum, to reorganizing reading experiences in a flexible curriculum, to imagining and implementing a department set of course offerings where all the classes are organized around themes. Taking the resources you have and organizing them using reading complexity circles (see Figure 2.1) can help you authorize *your* readers.

### **Working within a Fixed Curriculum**

As I started teaching, the curriculum already established by the departments was largely fixed with prescribed readings and sometimes prescribed materials. In cases like this, the process of crafting a reading experience begins with text placement. Which texts are already next to each other in the curriculum? Do they have anything

**FIGURE 2.1:** Reading complexity circles.

to say to each other? Can a few texts that are in close proximity to each other be grouped around a theme or essential question? Which short, accessible texts could I bring into the classroom to provide a context? How will the language of the theme serve as “reading Velcro” for each subsequent text? Often, in a fixed curriculum, the fulcrum text was canonical. Yet even with a traditional text at the center of unit design, I could still consider which texts to bring in from other units. I could also scour classrooms for unused resources that could add texture to the reading, discussion, and analysis of that major text. If you are using a textbook, ask if the selections can be reorganized around a theme or question. Imagine the selections becoming context or texture texts for other selections. Regardless of how tight the constraints on your

curriculum may be, organizing study around themes, bringing in short anchor pieces for context, and getting the texts you have out of isolation and into conversation with each other will advance a more authentic reading experience.

#### **Collaboration**

As Sarah's experience indicates, one place to meaningfully collaborate with colleagues is through the development of a flexible, textured reading curriculum.

### **Working with a Flexible Curriculum**

Several years into my career, as I acquired some experience and demonstrated competence in the classroom, the potential for a more flexible curriculum emerged. I volunteered for curriculum committees and found that I could still meet the local standards while reconfiguring *how* I went about organizing our learning. This flexibility enabled me to collaborate with other teachers in an effort to shift texts from one course or unit to another. In this case, there was the potential to rewrite or write in units of study where context, fulcrum, and texture texts align. In this case, it was helpful for me to reimagine the fulcrum text. Did it have to be the same whole-class novel whose place in the curriculum has seemed cemented? What if the text was nonfiction? What if it was poetry instead of a novel? What if it was contemporary instead of classic, or classic instead of contemporary? What if it was a literature circle or individual choice instead of whole class? In this case, reimagining the role of that major text as a fulcrum invites companionship with other texts where it may have been shadowed before. I also started to look outside of my closet and the department for resources. Could your library, school or public, find enough copies of a graphic novel to use as a texture text? Is there a young adult literature selection in a neighboring grade level that could create a context? Is there another department that uses full-length nonfiction texts that could be juxtaposed with the fulcrum text?

### **When You Can Create the Curriculum**

Most recently, as several influences aligned, my department and I had the opportunity to imagine and create a curriculum with the support of resources and funding. In this unique situation, the possibility of organizing not only units but entire courses around reading circles offered the potential for ongoing scaffolding from text to text, unit to unit, and course to course. As Figure 2.1 shows, reading circles bring multiple texts together.

## **Beyond Design: Meeting Readers Where They Are**

---

I think that many teachers have long taught to a set of standards. It's that intersection of content and skill all learners must have to be equipped as a member of a highly literate and quickly changing society. While teachers just entering the profession may draw from a defined set of national standards such as the CCSS to help them

find focus and purpose in their work, those teachers who have already established an “internal compass” of sorts come to this work of integration with a unique challenge. While established teachers may quickly understand the standards, I have found, through my own efforts and by working with other teachers, it’s taxing to determine how the language and implications of the standards make it into our day-to-day work.

Wielding a blueprint of instructional design means we’ve created the capacity for students to construct their own learning; meeting them in that process comes next. Teaching readers to be thinkers means we must engage with our students as they work to comprehend what they read, to use explicit evidence to support their readings, to pay close attention to word meanings, and to integrate the ideas of several texts to support their own response. The language of the reading standards sends us a clear message: Students must be able to read carefully and closely, using precise evidence to support analysis. This means that we will help students to use their personal connections and responses to texts as entry points, knowing this practice creates access to a text. It also means that as we guide students to reading as a generative process, the way they exit a text may be precipitated on how they entered it, but they will emerge from the reading having attended to precise language and having interacted with its nuances. I often think of the kinds of questions that surround our work in the classroom as either **entry questions** or **exit questions**. In other words, we will ask the kinds of questions that give our students *entrance* into a text: the question that activates schema, that connects to what they know, that piques a personal interest. Once they’re “in” we need to ask the kinds of questions that help them *exit* the text with a nuanced, layered reading. When we center our prised readings on the precise language of the text, we’re helping students to explore *how* or *why*.

So often, when working with standards, we subscribe to the subtext that if we teach all of the discrete parts (the grade band standards and even the further delineated interpretation of those, which often happens at the local level) then students will surely achieve the standard. However, it seems much more likely that if we teach to the anchor standard, and use the language of the grade band standards to inform our feedback and to guide our scaffolding, the purpose and focus of learning remains clear and steady. Otherwise, we operate with a compass that relies on our learners to make the connections and determine the learning purpose by virtue of being the only ones who have “done all of the grade band assignments.” It becomes part of our charge to resist a linear approach that compartmentalizes assignments corresponding to grade band standards and offer, instead, a recursive approach that moves in and out of standard and skill, recognizing that we aim to layer them for more authentic purposes rather than stack one task on top of another, hoping it won’t all topple over.

#### Common Core State Standards

The CCSS use the language of Anchor Standards (the standards that apply to 6–12) and grade band specific standards, which are delineated into 1a, 1b, and so forth. See Figure 1.1 for further clarification.

One way in which I aim to maintain a larger focus is through naming and enacting a process of reading, of thinking. In the beginning days of class, students talk not about what it means to be a good student, but what it means to be a good learner. As concepts of curiosity, playfulness, divergence, and perseverance enter their vocabulary, the focus of classroom work becomes not just acquiring a content-knowledge base or wielding a set of skills, but also on acquiring the dispositions that make someone an autonomous, lifelong learner.

At the end of every quarter, my students use a taxonomy of these dispositions to trace their progress as learners. Divided into six sections—reader, writer, viewer, communicator, thinker, and habits of mind—this taxonomy then fans out into two more layers. The next layer highlights words that would describe each section followed by a layer that describes the actions embodied by the learner. For example, a reader is also described as “active,” “critical,” and “voracious.” Some of the actions are “recognizing and building on patterns” or “challenging texts and conventional readings.” Students gauge their progress by highlighting just a couple of descriptors or actions they demonstrate. Through reflection and documentation, they connect the descriptions to their work and then choose a couple of new descriptors to pursue in the next quarter. This reflective invitation to the students serves as an outward reflection of the implicit process and about what inspires and guides my commitment to students: the belief in their ability to become autonomous, lifelong learners.

As you prepare to meet the teachers of Oak Park in this companion vignette, you’ll certainly see this same commitment to student learning reflected in their work. As Danielle Lillge takes you into their classrooms, you’ll be privy to how an entire team is establishing a culture of literacy that parallels the deepening reflections and practices of its teachers.

## Meet the English Language Arts Team, Oak Park High School

---

The CCSS guide the work of a team of Oak Park High School ELA teachers including Peter Haun, Carissa Peterson, Ann Rzepka, and Steven Snead, with the help of Linda Denstaedt, who are committed to changing their instruction with the goal of improving student learning. Understanding how and why this team of teachers has come together around the CCSS involves first considering the factors influencing their work.

Having transitioned from a white, Jewish, middle-class community to an urban fringe, black, working- and middle-class community over the past two decades, Oak Park's population shift is further complicated by the effects of economic downturn as families have left the city in search of jobs. Once a high school of 1,800 students, today the high school's 800 students arrive at school each day not only from local Oak Park neighborhoods but also through open-enrollment from nearby Detroit. The loss of student enrollment is also part of a larger narrative about how the school district's \$10 million deficit affects the quality of education. One huge indicator of these effects came when only 5 percent of Oak Park High School students demonstrated proficiency on state tests; consequently, Oak Park was labeled a high school in need of improvement.

Further complicating teachers' realities, Oak Park High School is the recent recipient of a large federal Shared Instrumentation Grant (SIG) aimed at funding instructional change that will improve students' performance, achievement, and ultimately test performance. SIG's immediate impact was on the administrative and staff population. This year, under the guidance of a new administrative team, approximately half of the high school's staff members are new to the building; many teachers, including Carissa and Ann, arrived after having taught in the district's middle-level buildings for years. The newly combined Oak Park faculty is charged with improving student performance. Without SIG the school district's deficit would likely prevent the Oak Park ELA team teachers from focusing on essential and complex instructional change. But, SIG also raises the stakes more than ever before; if the Oak Park ELA team members and their colleagues' efforts do not improve student performance, then the school runs the real risk of closure.

At this unique moment in their school's history, the Oak Park ELA team teachers have found in the CCSS a rationale to reshape their instruction and curricula, an impetus to think much more deeply and purposefully about their professional work, and a challenge they are only beginning to tackle with urgency. The CCSS focus on developing students as readers, writers, and thinkers across disciplines is something that has encouraged ELA team members to see their work as culture shifting and shaping. Just as the larger Oak Park community continues to shift, the team teachers recognize the need to help redefine the school culture in support of literacy learning that raises expectations for what students are capable of achieving.

This commitment to redefine school culture that will benefit student learning comes with associated challenges—for students and teachers. One such challenge emerges from generational, socioeconomic, cultural, and racial factors that form disconnects between students and teachers. As one of two African American male teachers in the school, Steven, who also taught in a model Detroit school, notes, "Most of our students come to school and there's no one here like them." Other challenges result from a school culture that has most recently focused on the maintenance of the status quo. As special education and content area teachers collaborate, they

face the difficulties of redefined professional roles and disparate training in team-teaching and literacy-based instruction. Additionally, students were not expected to read at home until this year, Carissa explains. And in Ann’s sixteenth year of teaching at both the middle school and high school levels, this is the first year that her students have had access to books that they are able to take home from school to read. She shares her colleagues’ concerns about changing the school culture from one where “students aren’t expected to even play school” to one where students meet “high expectations” because they can with the right instructional support. These are but a few of the challenges the Oak Park ELA team face as they endeavor to shift their practice in support of literacy learning.

### ***Teaching and Learning Practices for Reading in the Oak Park Team’s Classrooms***

As part of their effort to establish a school culture of literacy, the Oak Park teachers focus their reading instruction on developing students’ ability to think about texts

more deeply. By articulating and substantiating claims, for example, the learning tasks team teachers ask students to enact are congruent with the CCSS. All four teachers are working with students to understand how to meet such expectations by summarizing main ideas in reading selections, drawing on textual support for claims about the events and elements in the text, and articulating orally and in writing their interpretations of the textual evidence in support of their claims about the reading. However, the fluidity between reading, talking about reading, and writing about reading make extrapolating reading practices from other ELA threads such as speaking and listening difficult in the interactive, discourse-oriented classrooms Oak Park team teachers have established. If you were to walk into the Oak Park ELA team teachers’ classrooms, you would find teachers modeling for students the moves, thinking, and talk that critical readers employ within the interactive,

discourse-oriented approach they all share. Over time, team members have come to identify the following four elements you will see at play in the classroom snapshots below as central to how they define their interactive, discourse-oriented classrooms: shared habits of mind, skills, and strategies; authentic engagement in classroom talk; common language; and regular instructional adjustments based on student feedback data.

Carissa is modeling for her twelfth-grade students how she records her thinking about reading in her Reader’s/Writer’s Notebook as part of Oak Park’s shared habits. Students *and* teachers keep notebooks where they record their thinking. “Let me

**Integrated Teaching and Learning**

Most basically, the Oak Park team defines an interactive, discourse-oriented approach as one that views learning as a result of working with, listening to, and contributing to conversations with others through various ELA threads. For these teachers, discourse is the line through which reading, writing, speaking, listening, and therefore learning grow.

show you how I set this up in my notebook,” she explains before showing students explicitly how she makes decisions about what to record. Beyond just showing, Carissa expects her students to try on the process she models as “good critical readers”; she believes they are capable contributors to the collective learning in a class where half of the class population includes special education students. Her interactions with students acknowledge their thinking as a valuable asset to the shared learning through discussion: “Good point. I didn’t even include this one, Marcus,” she says, “Thank you.” Her encouragement of student responses also opens space for her to challenge students’ thinking: “I have a question for you. How does that quote about the sit-ups support what we said above?”

Seated in small tripods of desks next to large picture windows with walls displaying student work, Peter’s eleventh-grade students discuss their reading of *Night*. His students write entries in their Reader’s/Writer’s Notebooks in preparation for class discussion of characterization in the book. They work quietly but collaboratively in short conversations with others at their tripod about how their interpretations and connections link to one another while Peter canvasses the room writing observations on his clipboard and listening in on students’ conversations. Students’ purposeful engagement in classroom talk reflects Oak Park team members’ efforts to help students use talk as a way of making meaning of texts. Teachers’ help, though, comes not only from direct interaction with students but also from the way that they plan for and facilitate conversation in their classrooms. In the tripod discussions, Peter’s students clarify tasks for one another, provide each other with what he calls the “extra boost” to push their thinking further, and enact what strong readers do as they read. Peter’s efforts to establish a classroom community where discussion about reading is central results in a classroom dynamic where, he describes, students “get more help from each other than I could possibly” offer.

Across the snow-covered courtyard Steven’s tenth-grade students review story elements related to their reading of *The Color Purple*. He encourages students to substantiate the claims they are making about particular characters. At one point he says to Richard, “I like the claim you made. Celie does not know how to stand up for herself. We just need to find the evidence for that.” And when another student offers textual evidence by reading from a particular page, Steven presses her to explain the connection between the evidence and the claim: “How does that confirm the claim on the board about Celie?” At the same time, Steven sees value in helping his students understand why this discussion of claims, evidence, and interpretation matters beyond the immediacy of his classroom. He explains how the thinking moves students are making connect with the thinking employers are going to expect of the

**Common Core State Standards**  
Team members’ efforts build on the CCSS shift toward meaning-making as central to reading.

**Common Core State Standards**  
Team members’ focus on claims, evidence, and interpretation emerges directly from the high school reading standards.

students in the future. Oak Park teachers have committed to a common language as part of their interactive, discourse-oriented approach. All team members are talking with students throughout the building about claims, evidence, and interpretation.

**Integrated Teaching and Learning**

Team teachers' charts serve as reminders for students of class discussions and the moves or decisions that strong readers, writers, and thinkers enact.

**Connections**

In conversations such as Ann's, Oak Park team members are formatively assessing students' ability to engage with the text as they read using data they collect during each lesson both in student work and from classroom talk. Ann speaks about being able to adjust her instruction the following day as necessarily dependent on what she finds. For other ideas about how you might employ formative assessments, see Section III.

Visitors entering Ann's twelfth-grade English classroom down the hall find charts lining the walls, student desks facing one another, and an inviting area rug at the center of the space. The class is engaged in a discussion of *The Lovely Bones*, and Ann draws their attention to one chart in the center of a blackboard, which says, "Readers learn about characters through the problems they face. Readers use this knowledge to predict what will happen in the end of the novel." As they continue, Ann prompts students to return to the sticky notes they use to record their thinking while reading prior to class discussion. "Yes," she encourages, "so find the exact sentences in your books" that warrant the claims and interpretations drawn about the characters' problems. When Ann invites students to record their interpretations with textual support, she grabs a clipboard from her desk and travels around the room; she checks in with students for brief conferences about the sticky notes they prepared for class before bringing the class back together for a discussion of what they have found.

### ***The Oak Park Team's Journey: Pathways to Enact These Practices***

#### **Past Practice**

The use of an interactive, discourse-oriented workshop approach to instruction and learning is new for Oak Park students and most ELA teachers alike. In the past, ELA teachers worked from a common single textbook where they and their students plodded from reading selection to selection, and students had become accustomed to what Carissa describes as "answering question after question" in response. Peter humbly recognizes his reliance on the textbook and associated handouts drew heavily on his "own education." By and large Oak Park students were asked to recount information, follow procedures, and, as Ann describes, "play school."

#### **Shifting Practice**

The omnipresent threat of school closure has no doubt motivated team members' efforts to change instruction; yet at the same time, these teachers are deeply committed to providing their students with opportunities for learning that will benefit them beyond their days at Oak Park High School and beyond their experiences

with one high-stakes test. In other words, SIG may have prompted the teachers' immediate motivation to shift practice, but their commitment to their students stokes the fire that maintains their energy in the face of this challenging and uncharted journey.

Even so, team members' commitment alone would not sustain their efforts without access to and opportunity to collaboratively learn about instructional practices that best support their students' learning. The team members attribute much of their success in establishing a framework that grounds their instructional conversations and offers a map for their planning around the CCSS to the ongoing, sustained support of literacy leader Linda Denstaedt. Drawing on more than thirty years of classroom teaching, literacy leadership, authorship, and her role as co-director of the local Oakland National Writing Project site, Linda works with the team and other Oak Park teachers regularly in varied capacities. She is eager to attribute the team members' progress to their commitment to shifting and reflecting on their practice. But, as they describe the evolution of their work together where some team members questioned Linda's role early on in the year as "yet another" outsider keen on telling them what to do, the team members now eagerly talk about a synergetic working relationship with Linda. They note that Linda values their expertise and comes to conversations as a colleague; team members explain that her feedback and questions guide their decision making and shape a vision for what is possible at Oak Park High School for students and teachers alike. They believe in what they are creating together and they value Linda's role in helping them to achieve this shared vision.

In collaborative work with Linda and in regular guiding consultation with the CCSS, one key aspect of the team's shifting practice is their adoption of a discourse-oriented, interactive workshop approach to their classroom instruction. But just what this approach will grow to mean is something that the teachers are identifying and considering further as they enact units of study around this instructional model. At this point team members define a discourse-oriented, interactive workshop as one that contains the following elements:

- *Shared habits of mind, skills, and strategies across ELA threads*— Linda talks about developing students' "ways and tools for adopting an academic identity and/or creating metacognition and agency." Among these CCSS informed habits, skills, and strategies are those highlighted in the vignette snapshots in this chapter

#### **Collaboration**

The Oak Park team collaborates with the help of Linda. Many schools and districts have literacy coaches who work with groups of teachers. In Appendix A, you will find a list of resources about these types of collaborations.

#### **Common Core State Standards**

By drawing much of their common language for describing skills and strategies directly from the CCSS, Oak Park teachers are beginning to see the benefits for students. Peter teaches a resource class that includes students who have different ELA teachers. He talks readily about how these students are able to help one another and talk about what they are doing in different classes, even across grade levels, because they share the same language for naming the work they are engaged in. For Peter, the common language affords him opportunity to support students' learning across courses in ways he might not otherwise be able to.

around summarization, crafting claims, supporting claims with textual evidence, and warranting claims with logical explanations.

- *Authentic engagement in classroom talk*—Team teachers value talk, or discourse, as a critical vehicle for student learning. When students are asked to engage authentically in classroom discourse—whether in writing or speaking—with contributions that evidence their thinking and openness to others’ thinking, the Oak Park ELA team teachers have found students’ understanding and ability to extend their thinking far surpass the teachers’ past experiences of classroom interaction.
- *Common language*—But it’s not just about random talking for Oak Park ELA team teachers; rather, their focus on the centrality of language serves two specific purposes. First, team teachers’ shared language in their conversation about practice with one another enables them to label and talk concretely about the teaching practices they are enacting. The language they share to describe the pedagogical moves they make helps them translate their instruction into student actions. It is therefore not uncommon to hear team teachers explain to their classes, “Today during your independent reading, I want you to do what I just modeled for you.” Second, teachers use a common language with students to name explicitly and make visible the strategies and essential content that supports critical thinking. They use a common language for identifying and talking about the strategies and skills students are expected to use, or enact, in making meaning of the texts students read and discuss with others. Team teachers share this language as a part of building a culture with shared ways of talking about the work students and teachers are equally engaged in.

### Connections

Ann describes the close relationship she has come to see between class discussion, her conference discussions, and her formative assessment. “A lot of formative assessment is discussion. If I’m walking around [the classroom], I’m trying to notice and look for evidence to support” students’ ability to enact the day’s CCSS-informed learning task and thinking.

### Honoring Diversity

Since the CCSS expect all students to enact the standards and leave up to teachers and schools how best to do so, Oak Park ELA team members create intervention space during independent reading time and through targeted mini-lessons using classroom data so they can better meet the needs of all students in their classrooms.

- *Regular instructional adjustments based on student feedback data*—A shared language and shared practices also help the Oak Park ELA team teachers identify what to look for when assessing their students’ ongoing learning through formative assessment practices. In discussions with students during their independent reading, Oak Park ELA team teachers use what Peter refers to as “quick sorts” to formatively assess students’ enactments of the day’s learning task or strategy. Through observation and brief conversations with students about their work, teachers collect data in their notebooks to chart the patterns they see in students’ work. Using these data, they identify which students meet expectations and which students need further support to identify instructional interventions to consider before proceeding or in preparation for the next lesson.

## Evolving Practice

This list of elements that shape the team’s use of discourse-oriented, interactive classrooms is not exhaustive. Instead, the team members recognize that as they work to enact more CCSS informed units of study, they are learning to identify which elements of this approach are most critical to their students’ learning and their work with one another. The process of learning with and from their students is ongoing.

It would also be unrealistic to assume that the shift to the CCSS and the interactive workshop, discourse-oriented approach has come easily for Oak Park. The approach presents a different way of thinking about how to engage students. Ann shares honestly, “When I started . . . , I was apprehensive. Sometimes I think we do things for classroom management; I always felt like if I didn’t give kids something to do while they were reading, they wouldn’t read.” Giving up control of the classroom is a sentiment echoed by Ann’s colleagues when they describe the leap of faith they took in agreeing to adopt a different instructional approach.

The shift in instruction and CCSS expectations for students has not been without struggle either. For students comfortable with questions and answers in response to textbook reading selections, a discourse-oriented approach to learning “pushed [students] beyond their comfort zone,” Carissa describes. “The students have really been resistant. It’s hard to make the shift and then see them resistant.” But the team teachers also recognize that the instructional shift to an interactive classroom means that students are expected to more actively engage in the work of learning; they can no longer be passive consumers who arrive in classrooms to watch Oak Park teachers work.

Realistically, the Oak Park ELA team teachers’ collaborative efforts and journey illustrate the tension between frustration and celebration that accompanies difficult instructional change. In terms of celebration, their move beyond a culture that previously supported students’ passive engagement has revealed early shifts in their students’ attitudes and abilities. Ann describes, “What we’re doing now is making kids think more, instead of handing them the study guide and having them give the right or wrong answers.” The payoff for Carissa’s students has come as they’ve seen the relevance in the coursework. She describes how one day after an ACT preparation meeting with the junior class, the students returned to class and shared with her, “This is the first time I’ve learned anything in English.” They were able to see the connections between coursework and what they will be expected to perform on the test as well as future learning. Students’ recent performance on the ACT predictor PLAN test posted the highest reading scores ever in the district. Ann has noticed similar ability and engagement

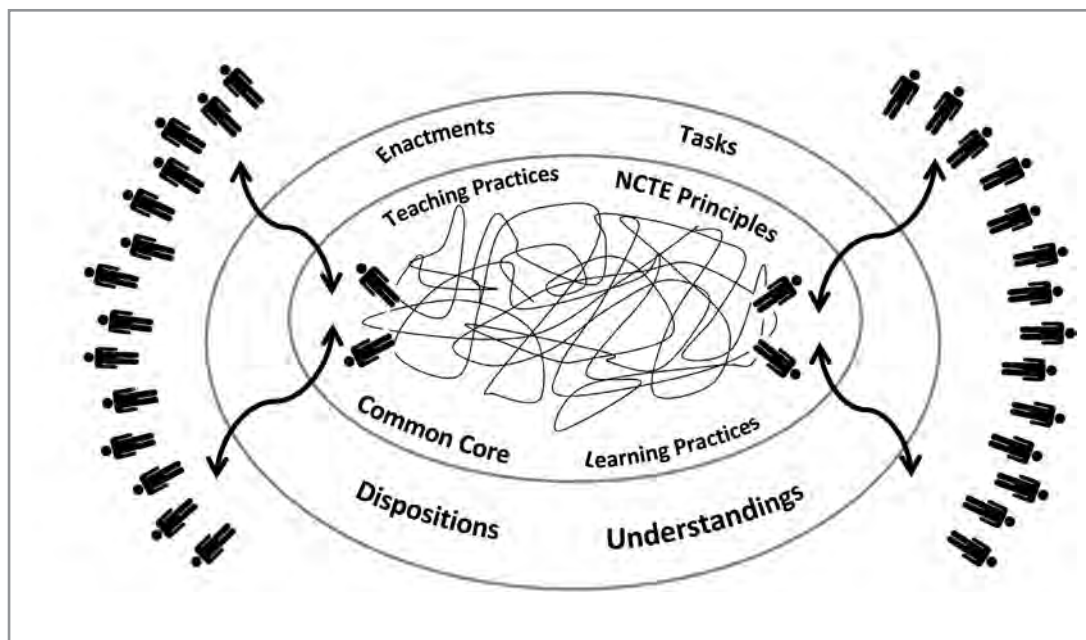

### Common Core State Standards

The Oak Park teachers believe the CCSS present an opportunity to raise the level of instruction and cognitive demands on students by focusing attention away from prior procedural display. They see the CCSS as offering them a way of making visible the complexities of teaching aimed at developing the independent readers, writers, and thinkers the CCSS document demands.

in her students' interactions in class: "I'm finding more now that my students are enjoying the book more. I had other teachers complain to me about students who are reading their books in the other teachers' classes."

## Charting the Practices

As Danielle has observed and articulated in the Oak Park vignette, how we think and talk about learning speaks volumes about what we value. And we, the teachers in these vignettes, jointly value fostering students' lifelong learning. As Ann, Carissa, Peter, Steven, Linda, and I illuminate a range of pathways by which teachers plan with this goal in mind, we would be negligent if we represented planning as a recipe with the same steps for all. In fact, our individual planning processes vary widely across time, courses, and students. Figure 2.2 represents the range of pathways, or processes, by which teachers consider the integration of their teaching and the learning they plan for students.

**FIGURE 2.2:** Pathways to planning and enacting instruction.

Through reflection or conversation, all the teachers in these vignettes speak to some form of wrestling with chaos in describing their thinking about planning. Figure 2.2 represents the chaos that we all navigate, but it also seeks to honor the fact that how we enter this chaos—the pathways by which we get there—varies. Some teachers enter through knowledge about their students, which are represented in the figure as encompassing and informing our thinking. Some teachers enter by thinking about the ultimate goals they have for their students; these are represented in the language of the outer circle including the dispositions, understandings, tasks, and enactments teachers expect students to demonstrate or develop. No matter the entrance, once in the middle we ultimately navigate the chaos that involves considering importantly the meeting place and relationship between these goals and the Common Core, NCTE principles, our teaching practices, and the learning practices we personally develop as well as those we foster in our students. My experiences as well as the vignette teachers' narratives affirm that we meet these considerations through various pathways differently over time.

Figure 2.2 visually represents the way we conceptualize these inextricably linked considerations that are at the heart of our decision making as teachers. We intentionally chose not to represent them as linear and one of our earliest versions of this figure actually included the words in the inner circle embedded within the chaos of the nest at the middle. Given the difficulty of actually reading this chaos, we chose in favor of readability; however, the original visual may more accurately represent why at times it is difficult for us to articulate the complexity of our thinking, acting, and ongoing learning about how to work with and meet the needs of diverse learners. Still, we believe it is possible and quite critical that we work to identify our decision making as well as how we conceive of the elements that inform our decisions, especially as we remind ourselves and others that the CCSS do not dictate the path we choose.

We hope that you will keep Figure 2.2 in mind as you read the charts that follow and that you will find at the end of each vignette chapter. In these charts, we endeavor to represent how the instructional decisions that emerge out of the chaos are, as I mentioned at the start of this section, deliberate, precise, and careful. For ease of representation, these charts read more linearly than the processes they depict. But they include the elements of our decision making and acting out of the chaos and toward deliberate goals and outcomes. Therefore our movement toward the CCSS is informed by the NCTE principles about what makes for strong ELA instruction and learning. With these principles in mind, we enact teaching practices that invite students to enact learning practices that will enable them to meet CCSS. The relationship between teaching and learning practices is key.

Our teaching opens the space and makes explicit for students how they can learn to enact particular tasks and to ultimately take on particular dispositions toward lifelong learning.

Therefore, the following charts highlight some of the key NCTE principles about and teaching practices for reading instruction that the teachers in this chapter's vignettes enact, connecting these to specific Reading Anchor Standards in the CCSS document, and merging how teachers expect students to evidence their ability to enact the standards in their learning.
